

ARTICLE VI

UNPOLLUTED WASTE WATER

Section ST 601

The County Public Works Director will not approve any development plan showing a direct connection of any sanitary effluent system to a public or private storm sewer system.

Section ST 602

The effluent from private sanitary sewer treatment plants or private, individual, sanitary sewer treatment systems, either individually or collectively discharged, is not classed as unpolluted wastewater. These systems are not permitted to discharge into any public storm sewer system. It is recommended that these systems be discharged into existing watercourses, preferably in wooded areas. For discharge and restrictions in other areas, refer to EXHIBIT No. 1, Storm Drainage Note Number 15.
